

HULL MAGNET, HEAVY DUTY

The hull magnet is used for temporarily fixing oil containment boom or oil sorbent boom to the hull of a ship or steel hull vessel. It is a very useful tool in emergency response situations due to its ability to create a stable attachment point anywhere on the ship's hull. This allows responders to isolate the spill's source points—drastically reducing the effort required to recover the spilled material and decontaminate the site.

It is also useful for affixing accommodation ladders, floating work platforms and gangways temporarily to ship's hull.

Designed to assist with meeting MARPOL & SOPEP regulations for onboard spill response equipment.

The magnet comes with a tethered float that is attached in case of accidental dropping overboard!

MODEL NUMBER	HM-1500 FL
DIMENSIONS	13.75" x 6.5"
SHIPPING WEIGHT	34 LBS
LIFE EXPECTANCY	Less than 1/2 of 1% loss of magnetic strength over a 100 years period.
CAPACITY	1,500 lbs
STYLE	Rectangular
COMPOSITION	Ceramic-8
FOB	Call for quote Seattle, WA
USUAL DELIVERY	5-7 days ARO
